

Customer Journey Map

Date	04 July 2026
Team ID	SOLO-CCFD-2026
Project Name	Credit Card Fraud Detection using Machine Learning
Maximum Marks	2 Marks

Map of the cardholder/analyst experience stage-by-stage through a transaction's fraud-screening lifecycle.

Phase of Journey	Stage 1: Transaction Occurs	Stage 2: Model Screens Transaction	Stage 3: Outcome & Review
Actions	Cardholder makes a purchase; transaction data (Time, Amount, PCA features) is generated	System extracts features and passes them to the trained fraud model for real-time scoring	Analyst reviews flagged transactions; genuine ones are approved automatically
Touchpoint	POS terminal / online checkout / payment gateway	Flask API endpoint / IBM Watson ML deployed scoring endpoint	Analyst dashboard, email/SMS alert to cardholder if flagged
Customer Thought	"I hope this goes through smoothly."	(Invisible to customer — happens in milliseconds)	"Was that alert really necessary?" or "Glad they caught that."
Customer Feeling	Neutral, routine	Neutral, routine	Relief (if protected) or mild frustration (if false positive)
Process Ownership	Payment processor	ML fraud detection service	Fraud/compliance analyst
Opportunities	Capture clean, low-latency transaction data	Reduce false positives via better feature engineering and threshold tuning	Faster analyst workflows with clear model explanations
